

GIROVEND VENDING INTERFACE

GiroVend Cashless Vending Readers can increase efficiency and turnover of vending operations by eliminating the need for unreliable coin handling mechanisms in vending machines. Users pay for goods using value 'preloaded' to a cashless payment card which can also be used to purchase from other units in a system installation.

GiroVend Readers allow for improvements in security, as well as the ability to offer an enhanced level of management control.

The vending readers can be fitted to a wide range of machine types and models. Many major European manufacturers can factory-fit GiroVend readers, while G4S Technology can offer a retrofitting service for existing vending units.

KEY FEATURES:

- Clear customer text via 2-line, 16-character LCD display
- Comprehensive management data with full transaction recording and reporting
- Automated data transfer between vending reader and management system using Local Area Network
- Differential pricing for various groups of users
