

WHAT DIFFERENTIATES G4S TECHNOLOGY?

G4S Technology is part of G4S plc, the world's leading security solutions group with over 600,000 employees and operations in over 110 countries. In the UK, G4S Technology are a market leader in providing fully integrated security solutions, protecting everything from small offices and schools to large multi-national organisations and high security Government facilities. We have been serving and protecting customers for over 30 years, delivering 30,000 systems by working together and listening to our clients' individual needs.

We realise that purchasing a security solution is not just a one-off acquisition but rather a significant long term investment where relationships need to be built. By choosing a G4S Technology system you have peace of mind that your expectations will be met and we will continue to understand and react to your needs throughout the lifetime of the system. As the manufacturer, we are well positioned to support you and we are proud that this philosophy has ensured our existing clients continue to stay with us.

The engineering team are dedicated to the installation and service of G4S Technology systems, ensuring that they have significant knowledge to provide unrivalled design, implementation and after-sales support. Wherever possible we allocate the same engineer to the same customer to allow a relationship to build over the lifetime of the system and provide qualified advice as the system expands. As they work for the manufacturer, engineers are close to new product developments too and can communicate the latest information to their customer as necessary.

Every G4S Technology security solution provides customers with the most advanced products available, allowing you to migrate to new technology in a cost effective way. We understand that there may be existing systems already installed and we thrive on managing the complex transition from a current system.

In the UK we design, manufacture, install and maintain leading edge security solutions (including access control, CCTV, identity management, alarm monitoring, visitor management and biometric technologies) to protect your staff, assets and premises. Our intelligent unified smart card solutions not only apply to security but cashless payments also, truly creating a single card solution for your organisation.

All G4S Technology solutions are manufactured by systems certified to ISO 9001:2000. In addition, we comply with ISO 14001 Standard for Environmental Management Systems and we attained this award in response to the growing customer demand for goods and services to be delivered in a socially and environmentally responsible way.

Our headquarters is based in Gloucestershire with regional offices in Glasgow, Newcastle and Maidenhead to provide national, regional and local support through a network of engineers based throughout the UK.

KEY HIGHLIGHTS

- Complete contracted support for the lifetime of the system
- Fully trained field based staff providing national coverage
- Unified access control, CCTV, identity management, alarm monitoring, visitor management and biometric technology
- Leading edge network based security solutions
- Integrated smart card solutions
- Design, develop, manufacture, install and maintain
- Scalable solutions suitable for all businesses
- Familiar Microsoft Windows platform
- True system flexibility to address the security challenges you face
- Future proofed solutions with full backwards compatibility
- Environmentally focused with ISO 14001 certification

At the heart of the G4S Technology solution is the Symmetry™ Security Management System. Symmetry offers users the next generation of security solutions, bringing the core aspects of building security to intelligent, unified solutions. The cutting edge technology within every Symmetry installation ensures 'tight integration' where there is seamless multi-way communication between the various technologies (including access control, CCTV, visitor management, smart card and biometrics) all on one single platform. This delivers unprecedented levels of system intelligence that can create alerts only at times of potential risk.

Manned and physical security measures are substantially enhanced by superior video management technology, image capture and retrieval – all fully integrated within Symmetry into one security platform that can be interrogated by operators based across multiple locations.

Symmetry effortlessly incorporates different technologies providing your organisation with a solution for all security and building control functions. In addition, as the system is IP based, the security solution can be simply connected to your existing IT network, to further reduce installation and cabling costs.

G4S Technology can be found in a diverse range of markets including government, education, finance, transportation, healthcare and utilities.
