

PayChannel

Chip and PIN

Hybrid – IP

PayChannel and leading terminal supplier Hypercom offer the complete solution for accepting credit and debit card payments in today's busy retail and hospitality environments. PayChannel IP is the latest in payments technology: a state of the art package that combines the latest in terminal hardware, IP connectivity and software integration to provide what your business requires – secure, fast and hassle-free payment processing with real time transaction reporting and management services.

PayChannel IP combines the complete package of services and features into a single low cost monthly fee.

- Hypercom Hybrid terminal rental and maintenance services
- Payment processing with internet based reporting
- Optional Acquiring agreement with a card accepting bank
- Optional integration to your EPOS system

Terminal Features

- IP connection over Broadband
- Magnetic stripe and chip based cards
- High speed transactions
- Built-in printer
- Stand alone or integrated to EPOS

Benefits

- Reduced cost — Hypercom Hybrid connects via an existing broadband line, eliminating the cost of a second telephone line for the terminal
- Improved management information — Web based reporting removes the need to store printed terminal reports and allows reconciliation of fees

“Telecash have worked successfully with Hypercom over the last few years with the Hypercom Hybrid terminal. With over 10,000 operational units in the field the single slot reader, for both Chip and Magnetic Stripe cards, has proved a popular choice with merchants and consumers alike. Every few seconds saved at the checkout process makes a difference to our customers and the straightforward Hybrid reader removes the uncertainty when cashiers are presented with cards.”

- Paul Campbell of Telecash

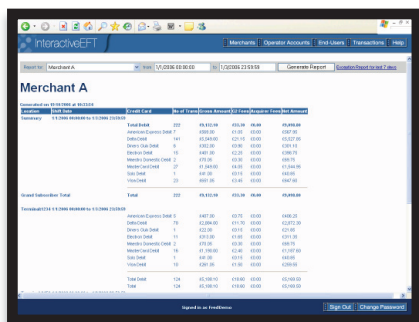

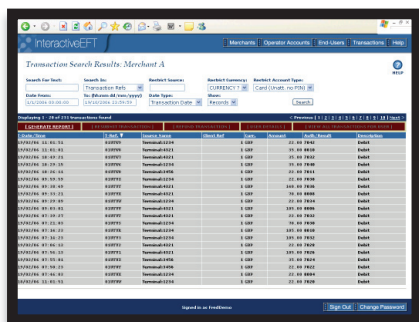

State of the art card processing systems with the assurance of market-leading support

Whether you're an existing user of payment terminals or looking to start accepting cards, PayChannel IP reduces the cost and increases the efficiency of card payments, providing a market leading solution at a market beating price.

PayChannel IP and Hypercom provide the added reassurance of knowing that your card processing will be backed up with the maintenance and support of a market leading terminal manufacturer and payment provider, making your card acceptance stress free.

Optional Integration to your EPOS System

The Hypercom Hybrid can operate stand alone or can be fully integrated into your EPOS system. EPOS integration eliminates the need for staff to manually key transaction amounts into the terminal, providing faster customer service and reducing operator error. For larger stores Hypercom Hybrid provides easy integration into the store network via the IP connection.

Interactive EFT: Transaction Management and Reporting

Interactive EFT provides a secure website to manage and report on your card transactions and acquiring bank charges. Daily, weekly and monthly revenue reports by terminal and by card scheme are just a click away from any internet enabled PC. Access is fully protected by usernames, passwords and permissions for different users in your organisation.
